PROFILE

Frontend-focused developer interested in making applied AI useful through clear interfaces. Projects span document-grounded learning, local-model applications, food tools, and interactive visualization. I also contribute to open-source products and collaborative AI workflows.

EDUCATION

Newton School of Technology
Computer Science & Engineering (AI & ML)

2025 - Present
B.Tech program

SELECTED PROJECTS

StudyMate
AI study partner for document-grounded answers, quizzes, and study plans; project write-up describes RAG with Gemma through Ollama.

TerraMind
Nature companion with local Ollama generation or a heuristic fallback, a PWA, and an IndexedDB field journal.

NutriScan AI
React and TypeScript food-analysis app for Indian cuisine, with photo or text input and Gemini-powered estimates.

Ocean3D / OCEAN-X
3D ocean-model and observation exploration using CesiumJS and WebGL; demo data is synthetic.

Skardela
Browser-only daily puzzle app with four puzzle types, streaks, and personal bests.

PlateProfit AI
Early product concept for food-business costing, menu scenarios, invoice OCR, and a local Ollama assistant.

OPEN SOURCE & COLLABORATION

CNTRL browser / Omnikon
Six merged pull requests in a Tauri/Rust and SolidJS codebase, including work around memory and privacy features, navigation, accessibility, and interface behavior.

Featured CNTRL contribution: PR #59

Karyalaya AI / HackDay 2026
Team contribution to PDF approval-note generation, formatting, audit logging, and OCR/RAG document handling; merged in the four-person project repository.

Karyalaya AI contribution: PR #9

TECHNICAL TOOLKIT

Frontend: React, TypeScript, Next.js, JavaScript, Tailwind CSS, Vite

Applied AI: Ollama, Gemini, RAG, OpenRouter

Beyond the UI: Python, FastAPI, Node.js, IndexedDB, CesiumJS, Three.js, WebGL
